

Meet Hamlet Protein

Your partner for healthy
and efficient young
animal nutrition

HAMLET
PROTEIN™

*“We believe that
animal wellbeing
starts with health”*

At Hamlet Protein we believe that animal wellbeing starts with health. That's why we specialize in making sure young animals get the right nutrition at the right time – to improve their lifetime performance overall. Or simply put, healthy animals mean healthy business.

The Hamlet Protein journey began 30 years ago in Denmark and since then, we have grown into a multinational company that partners with feed mills, premixers, home mixers, integrators and farmers all over the world.

We are passionate about young animal nutrition. That's at the core of everything we do. We know that every market is different, but you can always count on the commitment of the Hamlet Protein team, wherever you are in the world.

Health
through nutrition

More and more countries are limiting or completely stopping the use of antibiotic growth promoters (AGPs) in young animal feeds. At the same time, there is an increasing focus on banning zinc oxide (ZnO) from animal diets. At Hamlet Protein, we believe that abandoning AGPs makes no sense if they are merely replaced by therapeutic antibiotics in medicated feed.

No single product can replace antibiotics or ZnO. Without their use, a combination of specialty ingredients and additives, bio-security and good farm management is necessary to maintain productivity.

Other feed formulation challenges come from the restricted use or availability of animal protein sources like blood plasma, meat and bonemeal and fishmeal. Whether driven by regulations or changing consumer preferences, producers around the world have a growing need for vegetable alternatives to animal-derived proteins.

Research has shown that Hamlet Protein can be part of the solution. Our specialty soy proteins and fiber ingredients have proven efficacy in AGP and ZnO-free diets when compared with diets based on animal protein. Used in young animal nutrition, they lead to a more sustainable and productive lifecycle.

Consistently *high standards*

Our reputation is built on high standards, which we are determined to maintain. That is why we invest continuously in the quality of our products, processes and people. Through our consistent focus on vegetable-based specialty ingredients, we have become a world leader in young animal nutrition.

Our patented bio-conversion process equips us to deliver products of identical quality from our plants in Denmark and the US. We take pride in delivering what we promise with no short cuts. Our plants operate 24 hours a day, 7 days a week, 365 days a year, using the latest production and IT technology. In our state-of-the-art laboratories, we rigorously test raw materials and end products.

Testing takes place at all levels – in-vitro testing in our own and external labs and in-vivo testing in performance trials, where we cooperate with customers, research farms and leading universities. These species-specific trials are performed across all regions where we operate.

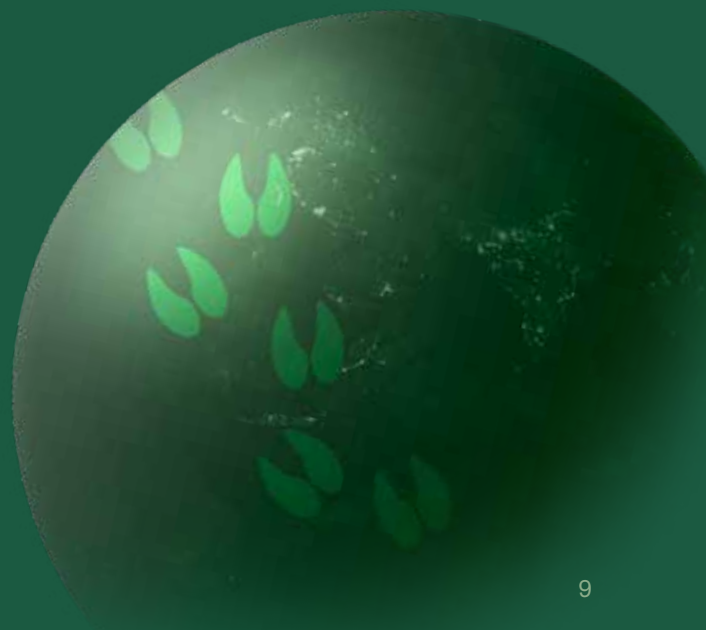

Global partnerships

At Hamlet Protein, we work openly and transparently with customers, industry experts and academia – across species and markets. Our goal is to transform scientific research and trial data into practical solutions that help producers address existing and future challenges.

For more than 25 years, Hamlet Protein has been a trusted partner within young animal health and nutrition. Because we are close to our customers, we understand local market needs and tailor solutions that make a difference.

Our customer relationships are long lasting. This enables us to learn from each other and share insights and data that help us improve. Whether through meetings, seminars, webinars, trade shows or articles, we are always connected to our customers and markets.

Committed to *a sustainable supply chain*

Demand for safe feed and food is increasing as the global population continues to grow. At the same time, we need to make responsible use of scarce resources to protect our planet. Our commitment to a sustainable supply chain is a core element of our global strategy.

When cultivated and processed in a responsible manner, soy can be the sustainable protein source of choice for animals, consumers and planet. At Hamlet Protein, we work with industry groups in Denmark and the US to drive soy sourcing from a sustainable, deforestation-free supply chain.

We have reduced our carbon footprint by 50% over the past 15 years. In Denmark, we have also partnered with a local district heating company. So, today, surplus heat from our production plant now warms more than 3,200 households.

Healthy Animals
– *Healthy Business*
